

Douglas Fir and White Fir Products

Hello, Lumber Friends! This is "Russ" Hogue, Sales Manager, bringing you a "radio picture" of Medford Corporation's varied Douglas Fir and White Fir products.

Our company produces four major species of lumber—Sugar and Ponderosa Pine, OLD GROWTH Douglas Fir and White Fir. For the present our largest production is in the species of Douglas Fir.

Our Douglas Fir is of superb quality—dense-grained, with long fibres and is unsurpassed for structural uses, particularly where stress grades are required in joists, studs, rafters and construction posts and beams. We have facilities for producing Fir timbers up to 16"x16" and 32' long. If required, we can furnish preservative treated dimension and timbers.

We make practically all types of yard and shed items in commons and clears. Our dense, old-growth Fir develops clears that are ideally suited to the production of flooring, which is ONE of our specialties, along with siding, finish, casing, base, etc. The quality of our clears is unsurpassed for the production of such industrial products as ladder and pole stock, car material and thick clears. All of our clears are expertly kiln dried in our battery of 18 kilns.

Our White Fir is small knot type of timber that we manufacture into boards and small dimension. It makes ideal sheathing and is well suited for light framing. Its soft texture makes building easy.

We take particular pride in the quality of our manufacture which is highly maintained by personalized supervision. The American Lumber Standard is our guide for sizes. Our grades are based upon the West Coast Bureau of Lumber Grades and Inspection rules and our graders are constantly supervised by Bureau inspection. Grade and trade marked lumber assures our customers of a standard quality product.

This is "Russ" Hogue, Sales Manager, signing off until the next broadcast. Be sure to tune in on M-E-D-C-O for Chapter 15.
